**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, 6-7, and 11-13 are drawn to a laser diode module with optical fiber, classified in class 385, subclass 93.
  - II. Claims 4, 5, and 8 are drawn to a method for laser diode module assembly, classified in class 372, subclass 43.
  - III. Claims 9-10 and 14 are drawn to a method of making a lens-fiber assembly, classified in class 359, subclass 341.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions (I) and (II & III) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the laser diode module does not require the optical power meter for assembly. Instead of an optical power meter, one could use an oscilloscope to measure power input. In addition, the laser diode module does not require the press-fitting technique for attaching parts together. One could use a

polymer adhesive. Furthermore, the lens-fiber assembly method is not limited to making solely lens-fiber assembly, it could be used to make an optical fiber amplifier as well.

3. Inventions (II) and (III) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because positioning the lens-fiber assembly within the laser diode module for optimization is not pertinent to the process of making the lens-fiber assembly itself. The subcombination has a separate utility applicable for constructing optical fiber amplifier components.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2882

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
